Discussions

“Mota Tiya Pakhi” and “Magic Mamuni” are two friends. Magic Mamuni challenged “Mota Tiya Pakhi” if he could solve the below problem.

The problem is to make a new word from any word by applying some rules. The basic rule is:

1. Words that begin with a vowel (a, e, i, o, or u) should just have the string “ay” (not including the quotes) appended to it. For example, “apple” becomes “appleay”.
2. Words that begin with a consonant (any letter than is not a, e, i, o or u) should have the first consonant removed and appended to the end of the word, and then appending “ay” as well. For example, “hello” becomes “ellohay”.

Input Format

Input will be a list of words, one per line, terminated by a line containing a single ‘#’. Each word will consist of no more than 20 lower case letters with no embedded white space. Note that the vowels in this context are assumed to be ‘a’, ‘e’, ‘i’, ‘o’, and ‘u’.

Constraints

No Constraints

Output Format

Output will be a list of words, one per line after applying the rules .

Sample Input 0

```
kushumaish
icefest
chapa
#
```

Sample Output 0

```
ushumaishkay
icefestay
hapacay
```
